LAMILUX CI-System Lichtband B

Световые полосы на сборочном цехе lufthansa technik, германия

Essential info

Place / country:	Frankfurt, Germany
Year:	2008
Building type:	Production hangar
Solutions:	<ul style="list-style-type: none">CI System Continuous Rooflight BMulti-layer polycarbonate glazingCI System Smoke Lift BPneumatic tandem interlocksFall-through protection gratingPPE anchorage points

Bright, non-glare lighting of hangar interior and integration of combined SHEV and ventilation function for permanently reliable usage. Guarantee of personal safety and the stability of the continuous rooflights and SHEV flaps.

- Multi-layer polycarbonate glazing, clear, non-glare and surface-treated
- Double flap systems equipped with wind baffles
- Pneumatic tandem interlocks to prevent sudden opening of flaps due to wind pressure and suction effect
- Connection to the building control system, implementation of complete control and release technology for smoke and heat exhaust and ventilation functions in the double flaps
- All continuous rooflights, fall-through protection gratings and SHEV flaps coated in client-specific colour
